PROJECTS

[-MY PORTFOLIO](#)

DK AI Image Generator

- The project uses Next.js and TypeScript with the help of OpenAI API.
- Microsoft Azure Storage is used for the backend to store images.
- Text-davinci-003 is used to produce prompts for images and DALL.E2.0 is used to create images.
- SWR is used to properly load the images displayed.
- Images are stored as blobs and pulled into the UI with the help of Azure Functions.

GitHub Repository: https://github.com/DeepK2K/AI-Image_Generator_DK.git

Instagram Clone Website

- The project uses React/Next.js, Firebase Firestore, Next-Auth, Faker API, Firebase Storage, and Heroicons.
- Users can sign in/sign out, upload photos, and post them.
- Different users with different Gmail accounts can comment and like the photos.
- The uploaded photos are fetched from Firebase Storage and rendered on the webpage via Firestore database.
- The website displays the time at which posts were commented.

GitHub Repository: <https://github.com/DeepK2K/Insta-Clone.git>

Amazon Clone Website

- The project uses React/Next.js, React-Redux, webhooks, Tailwind CSS, Next_Auth, Firebase Firestore, FakeStore API, and Stripe to build a functional e-commerce website.
- Users can sign in/sign out using only their Gmail accounts, making the authentication process quick and easy.
- The website uses Stripe checkout to process payments and stores purchase details in the Firebase Firestore database using webhooks.
